

Facebook Posts Bot

By Adrian Pop

Setup

1. Install Python 3 from the official website: <https://www.python.org/downloads/>
2. Run the setup.bat file by double clicking on it
3. Check the Google Chrome version that you have installed
 - a. Open Google Chrome
 - b. Click on the three dots from the top right corner
 - c. Go to Help
 - d. Go to About Google Chrome
 - e. Remember the first 3 digits from the version (e.g. 103.0.5060.114)
4. You can skip this step if your Google Chrome version starts with 103. In the project folder, go to chromedriver folder. There you will see 3 folders, each one corresponding to the first 3 digits of a Google Chrome version. Choose the folder that corresponds to your version. Open it and copy the chromedriver.exe. Paste chromedriver.exe in the project root folder.

Use

1. Start the app by double clicking on start.bat. This will open a web interface
2. Enter your Facebook account login Email and Password
3. In the groups field enter all the group links separated by comma and space. For example: group1, group2
4. Enter the message that you want to post
5. Click Start and let the bot do the boring tasks for you
6. You will be informed when the bot finishes its job
